

SNAP For Reply®

Fleetwood Software Specification Sheet

Software Name: SNAP for Reply® Worldwide, Mini, Plus, Mini+

Software Features:

- Automatic, authoring-free audience polling of multiple-choice questions within Microsoft PowerPoint™
- Content Analysis recognizes any PowerPoint slide containing questions created with standard enumerated text slide format and places a polling trigger
- Polls keypads and instantly graphs result summary which may be displayed for audience review or kept private for presenter use only
- Summary and individual results are saved and can be exported to HTML or Microsoft Excel for analysis and review
- Timer limits may be set to desired number of seconds
- Live timer tally window may be displayed while polling to show the current number of responses received
- Timer templates, including ‘unlimited timer’ that displays a rotating globe until stopped are available
- Custom clock templates allow you to customize and save clock preferences for later use
- Custom graph templates allow you to customize and save graph preferences; including graph style, color, enumeration type, etc.
- Default response timer and graph formats work with most PowerPoint slide designs
- Additional clock and graph templates can be selected prior to launching slideshow
- Single demographic filtering by criteria/subgroup display/reporting
- Simple gaming - up to 10 teams with ability for correct by team & team standings graphs
- Top x (up to 10) individual scores for individual competition
- Rostering/Individual tracking by name or keypad number
- Pre-test/Post-test comparative graphing

Reply® Systems supporting this audience response application:			
			
Reply® WorldWide	Reply® Mini	Reply® Plus	Reply® Mini+

- Impromptu questions
- Rank poll/select all that apply questions
- Control of the presentation and graph displays using a “Master Keypad” that you define
- Expanded reporting with team/individual scoring and by filtering subgroup
- Export results to MS Office Excel or HTML files.
- Comparative graphing allows you to view responses from two separate polling questions on one slide.

Distinguishing Elements:

SNAP's main distinguishing element is that polling can be incorporated with your PowerPoint presentation with very minimum set-up, time or knowledge of audience polling tools. It recognizes PowerPoint slides containing an enumerated list element as multiple-choice questions, and automatically inserts a trigger, or ActiveX polling object, on these slides when the slideshow is launched using the SNAP program. Users can choose to initiate polling of a question at any time while the slide is displayed, or pass it by if the enumerated list is simply talking points. After polling, a full screen graphic summary of audience responses is displayed following the poll, pulling the text for each response choice from the enumerated list and using the slideshow master background and a default user-selected color scheme.

Warranty: Software is warranted to perform substantially in accordance with the included documentation for a period of 1 year from the date of receipt.

Operating System Compatibility: *Windows XP, XP Pro, XP Home, Vista Home, Vista Pro
